

OUR ENVIRONMENTAL POLICY

ENVIRONMENTAL ASPECTS AS PART OF ALL OUR ACTIVITIES

Integrate environmental considerations into all decision-making and executive processes, especially when preparing and implementing new projects, where solutions are chosen based on their overall environmental impact.

ASSESSING AND REDUCING OUR ENVIRONMENTAL IMPACTS

Based on regular environmental impact assessments, plan and implement measures to eliminate or reduce these impacts both locally and globally.

REGULAR MONITORING AND CONTINUOUS IMPROVEMENT OF OUR ENVIRONMENTAL PROTECTION SYSTEM

Systematically monitor and evaluate the effectiveness of the environmental management system and ensure that any discovered shortcomings are promptly corrected and that the results of the evaluation are used to improve the system.

ENVIRONMENTALLY FRIENDLY PRODUCTS

Further develop the production of environmentally friendly products, both by introducing the best available technologies while gradually replacing morally obsolete products and by changes in the product portfolio.

COMPLIANCE WITH LEGISLATIVE AND OTHER REQUIREMENTS

Comply with all relevant requirements under applicable environmental legislation and related administrative decisions, as well as requirements under voluntary agreements.

ENVIRONMENTAL AWARENESS OF EMPLOYEES

To make employees aware of the negative impact of all activities on the environment and to systematically develop the knowledge, qualifications, responsibility and awareness of employees in the field of environmental protection, including reactions in non-standard situations.

OPEN AND TRANSPARENT COMMUNICATION

Communicate openly and responsively with the public and provide stakeholders with truthful information about environmental impacts. Provide customers with sufficient information for the safe use of chemical products and dispose of residues upon request.

INCREASED AWARENESS OF THE ENVIRONMENTAL ASPECTS OF CHEMICAL PRODUCTION

Actively participate in creating general awareness of the environmental aspects of the production, distribution and use of chemicals in cooperation with the professional public and industry associations in the Czech Republic and the EU.

DISPOSAL OF OLD ENVIRONMENTAL BURDENS

Removing environmental burdens that occurred in the past, but also preventing the causes of environmental damage related to intensive industrial production.
